JULIET window

A brand new window in the Amberclassic line is characterized by unique design, high thermal insulation and an unprecedented balance of technical performance and economy value.

Narrow face widths in the frame and sash for more light on the interior, straight-lined angular look outside and inside and slim construction depth create a modern and stylish design of **JULIET window.**

Classic simplicity

Smooth straight-lined style, which is currently setting the tone in a modern architecture and slim face widths in the frame and sash provide more light in the buildings.

Minimalist design

Simple edgy contours, matched right-angled glazing beads, multi-chamber slim profile technology suits with the minimalist trend of modern architecture.

High thermal and sound insulation

thanks to 74 mm profile technology. Six chambers in the frame and five in the sash favorably affect thermal insulation. The third, middle seal effectively blocks heat loss. The parameters for thermal protection were tested by the IFT Institute in Rosenheim.

A broad versatility of complete system

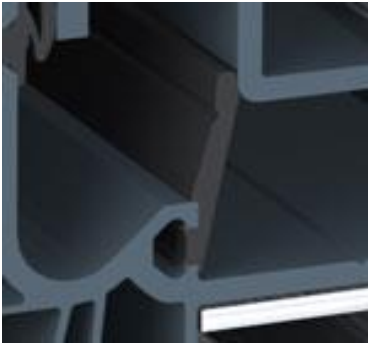

that includes windows, balcony and sliding doors.

* Calculation base: glass assembly with heat protection film and „Ultimate Swisspacer”, at U^f value = 1.0 W/(m²-K)

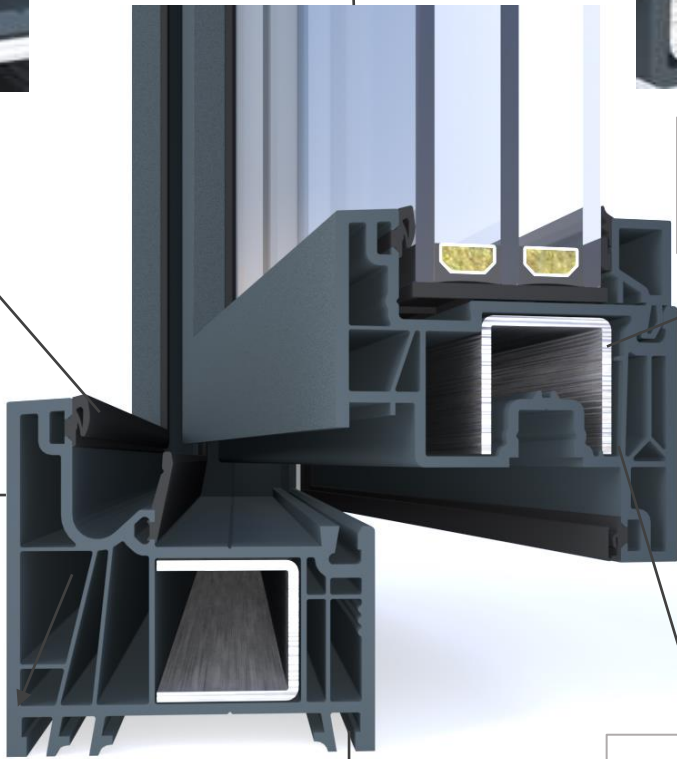

Berechnungsparameter:
